Subject: RE: Media query re DDT barrels of Santa Catalina island

Hi Emily,

EPA began discussions with several California agencies in December 2020. In April 2021 we began an assessment and review focused on Ocean Disposal Site #2 (northeast of Santa Catalina Island, CA), looking at legacy disposal of acid waste containing DDT at this location. EPA has met on this issue with Senator Feinstein, staff of L.A.-area Members of Congress, and local officials. We would be happy to provide additional information in the coming weeks as our work and discussions with our California and Federal agency partners progress.

Regards,

Mike Alpern - Director, Public Affairs

Hi Mike,

This is helpful, thanks.

Can you say when the review began? And will it look at legal and illegal dumping? My understanding is there is a mix. Also, has EPA done other briefings on this? I didn't find anything on your website but I could have missed that.

Thanks for getting back to me so quickly.

Emily

Hi Emily,

Here's our EPA Region 9 response:

EPA continues to work in close collaboration with federal and state agency partners on the DDT deep ocean disposal issue. This month we've met twice with California EPA, the California Natural Resources Agency, the State Water Quality Control Board, the Los Angeles Regional Water Quality Control Board, the California Department of Toxic Substances Control, NOAA, and the US Department of the Interior to chart a path forward.

We are aware of the recent Scripps Institute findings, and based on the most recent scientific research we and the aforementioned agencies have adopted an approach that begins with assessing the legacy of waste disposal at Disposal Site #2, northeast of Catalina. EPA is committed to leveraging our programs and resources to support this assessment, and we have already launched an initial review of the available historical record of disposal of acid waste containing DDT. In addition, we have been in regular contact on this complex challenge with Senator Feinstein, California EPA Secretary Blumenfeld and other federal, state and local officials.

Hi Mike,
As soon as possible if that's workable, given that the assembly passed a resolution on the issue today.
Thanks, Emily

Hi Michael,
Hope you are well.
Can you provide an update on any EPA response to the latest findings from Scripps Institute of Oceanography that mapped 25,000 barrels in waters between Santa Catalina Island and LA. The research was part of an overall look at DDT contamination in the area.

Background: <https://scripps.ucsd.edu/news/scripps-oceanography-completes-seafloor-survey-using-robotics-finds-thousands-possible-targets>

Has EPA issued any orders, investigations, queries, or other actions based on this latest data?

Also, the California Assembly today passed a resolution

https://leginfo.legislature.ca.gov/faces/billNavClient.xhtml?bill_id=202120220AJR2 urging Congress and EPA to take action related to the DDT dumping. Can you comment on this development?

Thanks, Emily

Emily C. Dooley
